MSC Software
Global Engineering Services
Delivering Certainty by Helping You Simulate Real World Behaviors
Industry Experience
The MSC Global Engineering Services organization is a team of engineers and scientists with expertise across a wide range of engineering disciplines and industries. MSC has a history of nearly 50 years of real world, hands-on practical experience.

Engineering Expertise You Can Trust
If you want results you can trust and the flexibility of working with extremely skilled engineers who know Computer Aided Engineering (CAE) and how it’s applied to engineering problems like yours, MSC is a team you can rely on to improve your product development process.

The MSC Global Engineering Services team helps companies in a variety of ways:
- Quick Start Projects
- Knowledge Transfer
- Mentoring: on-site or over the web
- Staff Augmentation
- On-site support
- Simulation Projects
- Customization and Process Automation
- Methods Development
- Solution Toolkits
- Simulation Data and Process Management
- Training

Flexible Services Offerings
We provide consulting support based on your specific needs and requirements. This could range from performing analysis for you on a project basis; one or two times a year, or providing full time staff members to help you create repeatable processes in-house.

You can depend on the MSC Global Engineering Services staff to:
- Save you time
- Automate your CAE processes
- Perform project based simulations
- Train your staff
- Mentor and support your staff
- Correlate and validate CAE results with test data
- Transfer knowledge
Get Started Today...
Select from a Broad Range of Engineering Services

Quick Start Projects
A Quick Start project will provide you with an MSC consultant at your site to accelerate the returns on your software investment. The consultant will help you install and configure MSC software products for your environment, and provide general instruction for your staff in using the software in your product development process.

Knowledge Transfer
The MSC Engineering Services team will perform simulations for you and then use the simulation as a basis for transferring the necessary knowledge to your staff. We do this through a step-by-step approach of training your team on the process we used to setup, simulate and post process your simulation. This ensures your teams are ready to successfully apply simulation to future design projects.

Mentoring; on-site or over the web
The MSC Engineering Services team provides mentoring services to our customers using our software products or 3rd party products. The mentoring can be on-site, where one of our specialists comes to your office for a period of time to provide support, or over the web using webex with one of our expert consultants.

Staff Augmentation
The MSC Engineering Services team can become an extension of your team, and provide on-site resources to augment your current staff. We will work with you to assign an industry expert to your staff and work hand-in-hand with the team until the project is complete and you are satisfied with the results.

On-site Support
On-site support can be a true life saver when you are in a situation where it is imperative that an expert be available at your facility when needed for either a short period of time, or the entire length of a design project which can sometimes be weeks, months or even years. You can always count on the MSC Services team to provide the flexibility to work with you whenever you are in a situation of needing on-site support. We have a team of experts across many engineering disciplines and industries, as well as in-depth knowledge of MSC products and 3rd party CAE products.

“MSC has been a key partner on the LSAT program. Their Adams software and consulting services reduce development cost and risk by providing an understanding of weapon dynamics early in the design process and in more detail than can be obtained from physical testing”
Paul Shipley, AAI Textron
Simulation Projects
If you only need to do analysis infrequently, the MSC Engineering Services team offers Simulation Projects and consulting to tackle your toughest problems. Our services team will work with you to understand your goals and your design problem first. Once we know what you are trying to accomplish, we will gather from you the necessary data such as CAD models, physical test data, and materials data, and then run your simulation for you.

Customization & Process Automation
MSC Software products are highly customizable and extendable. Customization allows customers to create specialized applications for proprietary processes within MSC Software tools. This can include custom user interfaces, automated reports, standardized modeling and simulation techniques, and specialized algorithms. MSC can then help you deploy and manage these customizations across your entire enterprise.

Methods Development
MSC Engineering Services experts evaluate your simulation needs and work with your staff to determine how to use simulation software to efficiently simulate your problem. This may include establishing simplifying assumptions, customizing numerical algorithms, and correlating models to test.

Solution Toolkits
Our services team has developed numerous solution toolkit extensions that provide capabilities for specialized applications. Solution toolkits provide tailored user interface environments for industry specific simulations.

The MSC Engineering Services team offers simulation projects and consulting to tackle your toughest problems.
MSC Solution Toolkits are available for purchase, and can be further customized to meet your needs.

Here is a sample toolkit list:

1. Tracked Vehicle
   Provides a graphical user interface (GUI) to create, modify, and simulate tracked vehicles with ease

2. Advanced Gears
   Environment for easy creation of gear forces and gear geometry

3. Cables
   Delivers a graphical user interface (GUI) to model cable and pulley systems

4. Wind Turbine Motion
   Custom interface for modeling and simulating horizontal axis wind turbines

5. Leafspring
   Provides easy modeling and simulation of beam based 3D models of leaf springs

*For more information, visit www.mscsoftware.com/services.

“Our MSC application engineer comes out at least once a month to see how we are doing and help us with any issues. In fact this plane would have been impossible to model without the phone support, on-site visits and consulting services provided by the MSC support team”

Dana Taylor, AeroVironment

Simulation Data and Process Management
MSC’s SimManager provides a powerful system for managing simulation data and processes. Out-of-the-Box, SimManager can provide instant value by maintaining the linkages and pedigree of the variety of data that is input to and output from a simulation and by enabling management to quickly assess the state of simulation tasks in the enterprise. MSC’s services can help install and implement SimManager and customize it for your unique data and processes.

Training
MSC offers basic and specialized training in the use of our simulation tools to maximize your investments in our software. Whether you need an introduction to our simulation tools or expert instruction in specialized applications, we offer the courses you want, with the expertise you deserve.

Flexible Training Offerings
To further meet your specific requirements, we offer the following options for live instruction.

- **Public Classroom Training** – Choose from our wide selection of courses conveniently offered at sites throughout the world.
- **Public Online Training** - The convenience of on-line learning with the interactivity and depth of a traditional classroom setting – no travel required. The entire instructor-led course is live and online on your own computer. Live Online Training is an efficient, cost effective and convenient way to gain skills in the use of our MSC simulation software.
- **Training at Your Facility** – If you have a number of employees who need training, we offer the cost effective option of bringing our class to your facility. This eliminates employee travel costs, minimizes time away from work, and can be arranged at your convenience.
- **Custom Courses** – If our standard seminar offerings do not meet your training requirements, MSC can develop a course or set of courses tailored to your specific needs. A custom course might include a combination of topics from several standard courses or specialized material not found in any of our standard seminars. MSC will work with your staff to design the course you need.

MSC can deliver custom and private courses live or via the web. We can also help ensure that you have the adequate hardware and software licenses available for private courses.

MSC Global Engineering Services
Select options that work best for you:

- Knowledge Transfer
- Quick Start Projects
- Mentoring
- Methods Development
- On-site Support
- Staff Augmentation
- Customization & Process Automation
- Simulation Data & Process Management
- Training
- Solution Toolkits
- Simulation Projects

Standard Curriculum

The following is a list of standard courses offered. Please refer to the MSC Software training website at http://training.mscsoftware.com for detailed course descriptions and dates offered at sites throughout the world.

### Adams/MD Adams
- Basic Adams Full Simulation Package ADM701
- Basic Adams/Solver ADM702
- Advanced Adams/Solver ADM703
- Advanced Parametrics, Design Sensitivity, and Optimization using Adams/View ADM704A
- Automating Tasks using Adams/View Scripting, Macros, and GII Customization ADM704B
- Basic Controls ADM710
- Adams/Vibration ADM720
- Adams/Car ADM740

### Dytran
- Introduction to Langrangian Analysis Using Dytran DYT101
- Introduction To Eularian And Coupled Analysis Using Dytran DYT102
- Introduction to Airbag Analysis and Occupant Safety Using Dytran DYT103

### Easy5
- Dynamic System Modeling Simulation and Analysis using Easy5 (Intro Class) EAS101
- Modeling Simulation of Fluid Power Systems Using Easy5 EAS103
- Gas Systems Modeling and Simulation with Easy5 EAS105

### Marc
- Marc Mentat Introduction MAR101
- Marc Mentat Advanced MAR102
- Marc Experimental Elastomer Analysis MAR103
- Experimental Biomaterials Analysis Workshop Update MAR105
- Introduction to Engineering Analysis using Marc and Patran MAR120

### MSC / MD Nastran
- Basics MSC Nastran Linear Static and Normal Modes Analysis NAS101
- MSC Nastran Dynamic Analysis - NAS102
- MSC Nastran Nonlinear Analysis - NAS103
- MSC Nastran Thermal Analysis - NAS104
- Practical Finite Element Analysis Techniques using MSC Nastran NAS105
- Basic Substructure Analysis using MSC Nastran - Primary Superelements NAS106
- Advanced Substructure Analysis using MSC Nastran - Secondary Superelements NAS107
- DMAP and Database Application in MSC Nastran NAS110
- MSC Nastran Aeroelastic Analysis - NAS111
- Analysis of Composite Materials with MSC Nastran NAS113
- Fluid Structure Analysis in MSC Nastran NAS115
- Practical Dynamic Analysis in MSC Nastran NAS114
- Linear Static, Normal Modes, and Buckling Analysis using MSC/MD Nastran & Patran NAS120
- Dynamic Analysis Using Patran and MSC Nastran NAS124
- MSC Nastran Implicit Nonlinear Analysis MSC Nastran NAS123
- Explicit Nonlinear Analysis Using MD Nastran & Patran NAS125
- Contact Analysis Using MD Nastran & Patran NAS133
- Implicit Nonlinear Analysis Using MD Nastran and Patran NAS400

### Patran
- Computer Based Modeling for Design and Analysis with Patran PAT301
- Computer Based Modeling for Design and Analysis for Aerospace Application PAT301 AERO
- Patran for Advanced Users PAT302
- Introduction to Patran Command Language (PCL) PAT304
- Thermal Analysis Using Patran Thermal PAT312
- Durability and Fatigue Life Estimation Using MSC Fatigue PAT318
- Fatigue Analysis of Dynamically Responsive Systems Using FEA PAT319
- Patran Introduction to Laminate Modeler PAT325

### SimDesigner
- Structural and Thermal Analysis Using SimDesigner SMD101
- SimDesigner Motion for CATIA V5 SMD102

### SimXpert
- Introduction to MSC SimXpert SMX101
- MSC SimXpert Linear Static Analysis SMX120
- MSC SimXpert Thermal Analysis SMX124
- MSC SimXpert Dynamic Analysis SMX122
- Introduction to MSC SimXpert MD Explicit Workspace SMX126
- MSC SimXpert Templates SMX131
- Nonlinear Structural Analysis with SimXpert SMX400

### Smibona
- Network Thermal Analysis Using Sinda SNDO01
- Thermal analysis using Patran with Sinda SNDO02
- Spacecraft Thermal Analysis Using THERMICA V4 SNDO03

### Sinda
- Analysis Using MSC Sinda SNDO01
- Analysis Using Patran with Sinda SNDO02
- Analysis of Thermally Coupled Dynamic Systems using FEA SNDO03
- Patran Introduction to Laminate Modeler PAT325

### SimManager
- Introduction to SimManager SMM101

### Flightloads & Dynamics
- Introduction to MSC Flightloads & Nastran Aeroelastic Analysis FLD120
- Flightloads and Aeroelastic - Static Analysis FLD120S

### Mvision
- Using MSC Mvision Materials System MVI320

Note that there may be slight variations in courses offered for some regions. Please refer to the MSC Software corporate website at http://www.mscsoftware.com for regional course curriculum.
